QuantumPro Debuts Way To Deploy Tracers Easily

HOUSTON—QuantumPro Inc. has launched PerfTrac™-R technology, which the company presents as the industry's first universal snap-on nanoparticle tracer device designed to revolutionize well production diagnostics.

PerfTrac-R delivers a high-fidelity nanoparticle tracer payload directly onto the charge face of perforating guns. Upon detonation, it instantly releases its full tracer mass into the formation, offering precise, real-time data on perforation flow efficiency and stimulation distribution, QuantumPro says.

Because the system requires no OEM modification, works with all major perforating systems, and can be installed in minutes, it dramatically simplifies deployment, QuantumPro continues. The company says the device empowers operators to accurately identify active versus inactive perforation clusters, quantify stimulation effectiveness, and improve completion designs.

“PerfTrac-R transforms how we understand and optimize well performance,” says Talgat Shokanov, CEO of QuantumPro Inc. “It’s a simple, universal solution delivering complex, vital flow data.”
